3 Introduction

The purpose of this document is to aid the reader in accessing / installing the UDD-viewer, and to describe how the tool can be used.

4 How to run the UDD-viewer locally

This is the recommended way to use the UDD-viewer, and gives the user access to the tool without internet access.

4.1 Installation requirements

The UDD-viewer provided as a zip-file is bundled with scripts for running the viewer. The scripts depend on python 2.x.

4.1.1 Windows

Python needs to be installed on Windows, use this URL to download: <u>Get Python 2.7.6</u> Install Python into default path (c:\python27) and make sure the path to python.exe is in your PATH variable.

4.1.2 Mac and Linux

For most versions of Mac OS X and Linux Distributions, Python will be provided by default.

4.2 Running the UDD-viewer

Unzip the zip-file, in the unzipped folder you have scripts provided for Windows, Mac OS X and Linux. Previous instances of the UDD-viewer must have been stopped before a new instance is started.

To stop the UDD-viewer server, open the terminal started with the startup script and press CTRL+C to stop it.

4.2.1 Windows

Double left click on start_UDD_windows.bat file. A local webserver runing with python is started and your default browser will open with the correct URL for the UDD-viewer.

4.2.2 Mac OS X

Double left click on start_UDD_mac.command file. A local webserver running with python is started and your default browser will open with the correct URL for the UDD-viewer.

4.2.3 Linux

Double left click on start_UDD_linux.sh file. A local webserver running with python is started and your default browser will open with the correct URL for the UDD-viewer.

Please note that your flavour of Linux must be configured to run executable text files, and the Executable permission needs to be set on the start_UDD_linux.sh file before double clicking on the file will work.

4.2.4 Alternative

You can also use your own webserver, you need to access the viewer like this: http://<ip:port>/path/to/udd/

5 How to access the UDD-viewer from a URL

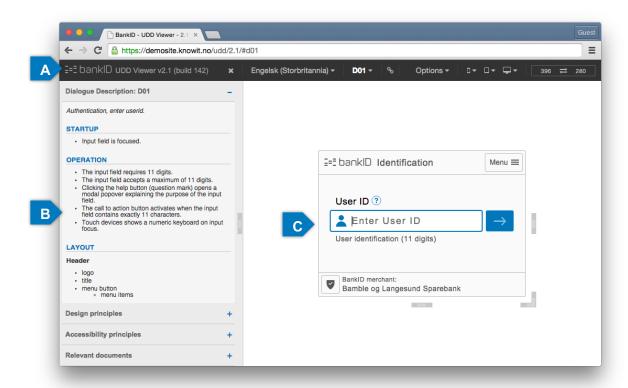

An online version of the UDD-viewer is available at the following locations: https://tools-preprod.bankid.no
https://tools.bankid.no

The Web-UDDs at the two different locations correspond to the client versions running on respectively preprod and prod.

Please note the build number (top left) when referring to this UDD-viewer.

6 How to use the UDD-viewer

The UDD-viewer lets you access all UDD-screens and corresponding documentation (description, design priciples and accessibility principles) in your browser.

6.1 A - UDD-Navigation

The black stripe on the top contains the navigation for the UDD-viewer. From left:

- The close icon hides the info panel (B). Re-open with the menu-icon when closed.
- The language dropdown lets the user choose which language should be used in the UDD Viewer. In addition, there is a special "MOCK" language that is used by the development team to determine the maximum length of the various text fields. Shortcut SPACE+L.
- The "D01" dropdown lets you choose which UDD you want displayed in the main area (C).
 You can also open the dropdown with shortcut SPACE+U. Scroll or use the type-as-you-go filter for quick access. The type-as-you-go filter can be used to:
 - o filter the list of available dialogues by name. Typing "D0" will remove all dialogues except those starting with a "D0".
 - o filter the list by typing in one of the following tags: "password", "otp", "userid", "auth", "sign", "pay".

- The link-icon opens a full-screen version of the current UDD-screen in a new tab. This may be useful when displaying the screen on another device, such as a smartphone. Access the url on the device you want to test on.
- Options menu. (Primarily for developers)
 - Auto focus on/off. Sets the inputfield in focus (only on desktop).
 Disable this if you want to use keyboard to flip through UDD-screens (Alt-arrow up/down).
 - Notify focus on/off. Shows an info box at the bottom, containing information about the focused element.
 - o Edit Password on/off. Sets the UDD in edit password-mode. Eks. Change password option in the UDDs menu will be disabled in this mode.
 - Challange R. (ms) input field. Time to wait for challenge response to be retrieved (in ms.)
 - o Password (ms) input field. Time to wait for show password to be hidden (in ms.)
- On the top right there are options to change the UDD size with device defaults or type custom size and switch rotation.

6.2 B - Info panel

On the left side you will have description for the shown UDD. These are divided into 4 parts and contain general and UDD-specific information:

- Dialogue Description
 UDD specific Information (similar to JAVA-UDD), Startup behavior, Operation details and Layout elements.
- Design principles
 General details on Client size, Responsive behavior, Animation, Colors, Icons, Fontsizes and
 Other sizes.
- Accessibility principles
 General details on WCAG 2.0 and Funka Nu guidelines, UU-Measures taken, Tab order and
 Reading order.
- Relevant documents
- Pull the handle on the middle-right to adjust the width of the panel.

6.3 C - Main content

Here you can see and use the displayed UDD, you are also able to resize the UDD using the handles below, right-bottom-corner and right to the client. The active size is reflected in the top right corner.

You can use PAGE UP/DOWN or ALT+ARROW UP/DOWN to browse to next or previous UDD in the list (Disable autofocus first).

7 Landingpage for frameMode=redirect

The UDD-viewer includes an example of the landing page when using frameMode=redirect. To open the example open the "Relevant documents" accordion menu. Clicking the link will open the landing page in a new window or tab.

Figure 1 - Link to the redirect landing page can be found under the Relevant documents accordion tab.

7.1 Selected UDD

The UDD currently selected in the UDD-viewer will be used as example for the Web-client's iframe in the redirect's landing page. E.g. if D08 is the selected UDD, when clicking the link, that UDD will also be presented in the Web-client's iframe.

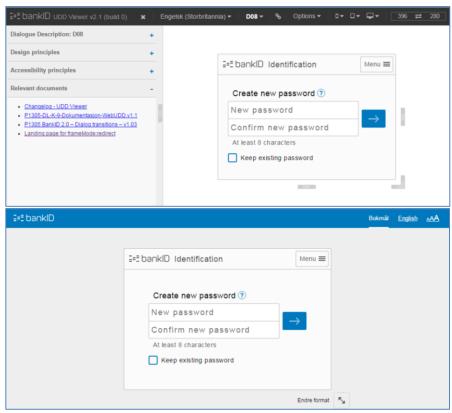

Figure 2 - The UDD selected in the UDD-viewer will be the same UDD presented in the redirect landing page.

7.2 Language

The redirect landing page has two language options; "Bokmål" (Norwegian) and "English". These options will *only change the text for the redirect page itself*, meaning that whatever UDD that is presented in the Web-client's iframe will be unaffected.

The language for the UDD is always English, no matter what language was selected in the UDD-viewer before opening the landing page.

8 Revision

Version	Details	Date
1.4	Updated document version for preprod	30.05.2016
1.3	Updated support mail, URLs in chapter 5, date and version	30.09.2015
